Ömer Yasir OĞUZ

The names and current photos of the students should be on the first page and the following text should be inserted and signed.

Şerefim ve inandığım tüm değerler adına yemin ederim ki bu sınavda hiçbir yerden kopya çekmedim ve etik kurallarına karşı gelmedim.

I swear on behalf of my honor and all the values I believe in that I did not cheat in this exam from anywhere and I did not violate the ethic rules.

PHASE 1

Brief Description of the System

The automotive industry encompasses the design, development, manufacturing, marketing, and sales of motor vehicles. It's a vast industry that includes a wide range of vehicles, from passenger cars to trucks and commercial vehicles.

Goals:

1) Provide exceptional customer service, including personalized consultations, efficient service delivery, and a comfortable waiting area.
2) Optimize inventory management, pricing strategies, and marketing efforts to increase sales and reduce operational costs.
3) Build a strong brand identity through consistent quality, innovative services, and positive customer experiences.

Scope Definition

The automotive gallery and car service aims to provide a comprehensive range of services, including vehicle sales, maintenance, and repair. The scope of the business encompasses new and used car sales, vehicle customization, routine maintenance services, diagnostic checks, bodywork repairs, and paint jobs. Additionally, the gallery will offer a wide selection of automotive accessories and merchandise.

Determining System Requirements

The automotive gallery and car service system will need to meet several requirements to ensure efficient operations and customer satisfaction. These include robust inventory management, secure customer data management, efficient appointment scheduling, and accurate financial tracking. The system should also integrate with various external systems, such as telematics and supplier databases, to optimize operations and provide real-time insights.

System Requirements

1. **Inventory Management:** Vehicle Information: Detailed records of each vehicle, including make, model, year, color, VIN, purchase price, and current market value.
2. **Customer Profiles:** Detailed customer information, including contact details, purchase history, and preferences.
3. **Sales Transactions:** Processing sales of vehicles, parts, and accessories.
4. **Online Booking:** Allowing customers to book appointments online, reducing administrative overhead.
5. **Work Order Management:** Creating and managing work orders for each service job.
6. **Accounting:** Generating invoices, tracking revenue, and managing expenses.
7. **Data Encryption:** Encrypting sensitive data, such as customer information and financial records

8. **Supplier Systems:** Integrating with supplier systems to streamline ordering and inventory management
9. **Service Reports:** Analyzing service performance and identifying areas for improvement.

Entities

- **Car**

The Car entity represents a specific vehicle available in showrooms. It includes details such as the vehicle identification number (CHASIS ID), current location, vehicle class, insurance policy information, seating capacity, model, color, registration plate number, and a unique QR code for easy identification and rental. CAR_PRICE’s are in dollars unit.

- **Contact**

The Contact entity represents a person or organization with whom the car company interacts. It includes information such as the contact's name, contact information (phone number, email address), address, and relationship to the company (e.g., customer, supplier, partner). This information is essential for effective communication, building relationships, and managing business operations.

- **Customer**

The Customer entity represents a person who interacts with the cars system. It includes information such as the customer's name, contact information, address, driver's license details, and payment information. This information is essential for identifying customers, processing bookings, and managing customer relationships.

- **Damage**

The Damage entity represents any harm or defect incurred by a vehicle. It includes details such as the type of damage, the estimated repair cost. This information is crucial for maintaining vehicle condition, calculating repair expenses, and ensuring accountability in cases of accidents or misuse.

- **Employee**

The Employee entity represents an individual working for the car company. It includes information such as the employee's name, employee ID, job role, contact information, and salary details. This information is essential for managing employee records, payroll, and performance evaluations.

- **Engine**

The Engine entity represents the heart of a vehicle. It includes details such as engine type, horsepower, fuel type, and maintenance history. This information is crucial for determining a car's performance, fuel efficiency, and overall condition.

- **Engine Condition**

The Engine Condition entity represents the current state of a car's engine. It includes details such as engine performance, oil level, coolant level, and any potential issues or required repairs. This information is crucial for assessing the overall health of the vehicle, scheduling maintenance, and ensuring its safe operation.

- **Feedback**

The Feedback entity represents customer opinions or reviews about their experience with the vehicle or service. It includes details such as the customer's id, the rating, and any specific comments. This information is valuable for improving customer satisfaction, identifying areas for improvement, and enhancing overall service quality. They will rate as 0-5.

- **Order**

The Order entity represents a request to purchase a car. It includes details such as the customer's information, the specific car model or configuration, the desired delivery date, and any special requests or customizations. This information is essential for processing orders, managing inventory, and fulfilling customer requests.

- **Payment**

The Payment entity stores information related to financial transactions within the car rental system. It includes a unique ID, the user's credit card number, the associated bill ID, the total amount paid, and the date of the payment. This information is essential for tracking and reconciling financial transactions.

- **Service**

The Service entity in this context represents a specific type of maintenance or repair service performed on a vehicle. It includes details such as the type of service, the date it was performed, the associated costs, and the mechanic who carried out the work. This information is crucial for tracking vehicle maintenance history, scheduling future services, and ensuring the overall reliability of the vehicle.

- **Substation**

Substation of cars refers to the process of replacing or swapping out specific components or systems in a vehicle.

- **Test**

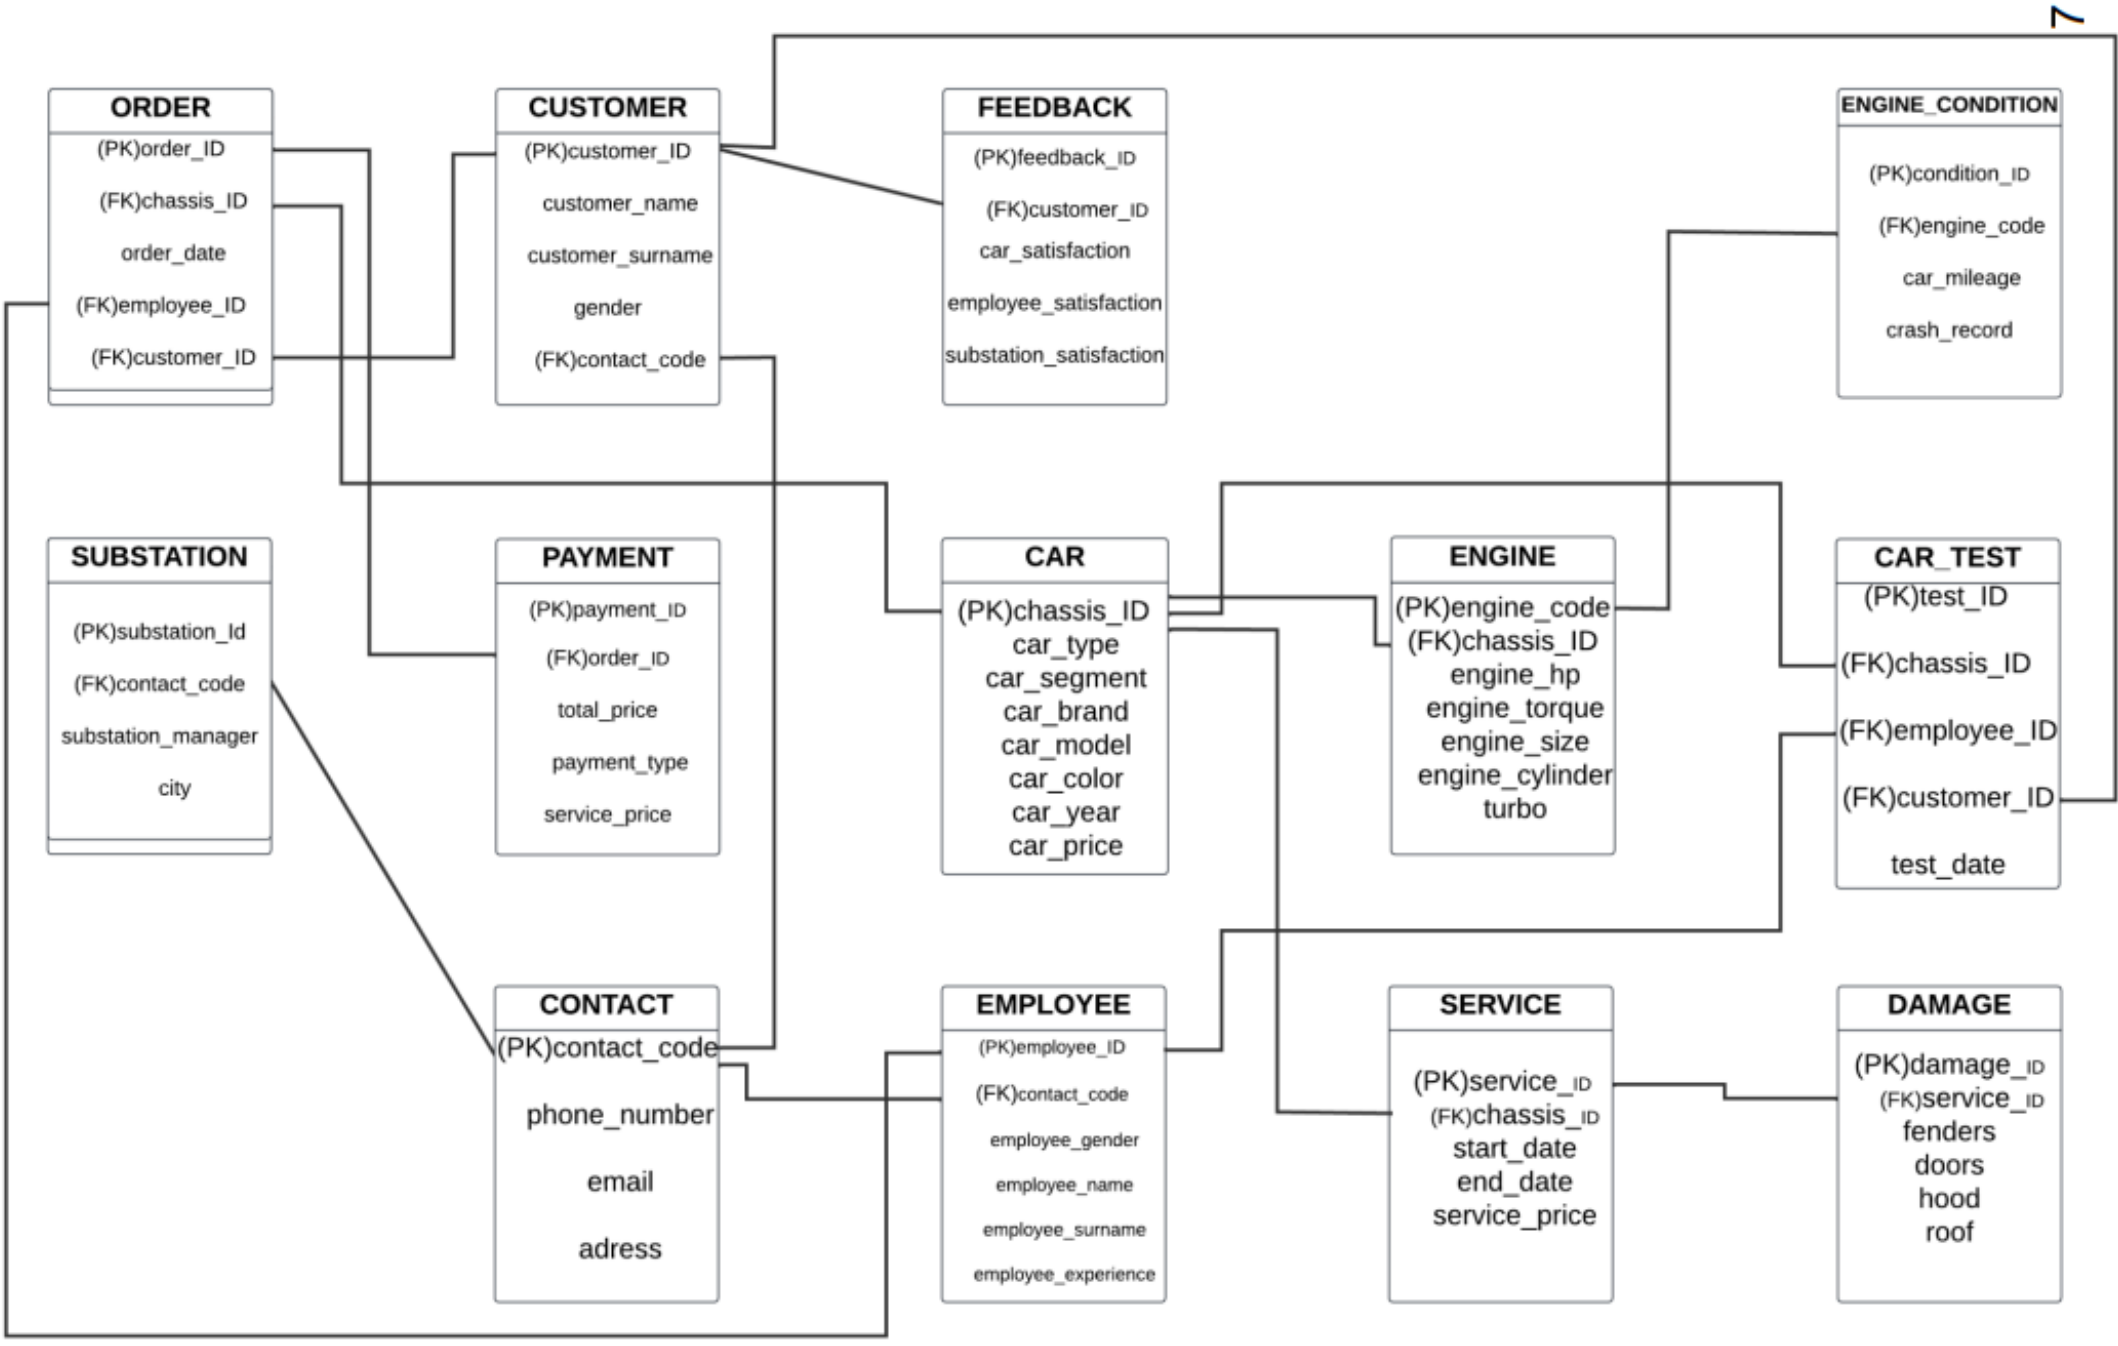

The Test Drive entity represents a specific instance of a potential customer driving a car to evaluate its suitability for purchase. It includes details such as the date and time of the test drive, the specific car model tested, the salesperson who conducted the test drive, and any feedback or comments provided by the customer. This information is valuable for gathering customer insights, tracking sales leads, and improving the overall sales process.

2.1.1(What new cars have been added to the database system, including their details such as chassis ID, type, segment, brand, model, color, year, and price?)

```
INSERT INTO CARS (CAR_CHASIS_ID, CAR_TYPE, CAR_SEGMENT, CAR_BRAND, CAR_MODEL, CAR_COLOR,
CAR_YEAR, CAR_PRICE)
VALUES
    (41, 'SUV', 'LUXURY', 'BMW', 'X7 M50i', 'BLACK', 2021, 1350000.00),
    (42, 'SEDAN', 'PREMIUM', 'MERCEDES', 'S580', 'WHITE', 2022, 1450000.00),
    (43, 'COUPE', 'SPORT', 'AUDI', 'RS5', 'RED', 2021, 950000.00),
    (44, 'HATCHBACK', 'ECONOMY', 'VOLKSWAGEN', 'GOLF GTI', 'BLUE', 2020, 320000.00),
    (45, 'TRUCK', 'UTILITY', 'FORD', 'F-150 RAPTOR', 'GRAY', 2023, 800000.00);
```

2.1.2(What new customers have been added to the database system, including their details such as customer ID, name, surname, gender, and contact code?)

```
INSERT INTO CUSTOMER (CUSTOMER_ID, CUSTOMER_NAME, CUSTOMER_SURNAME,
CUSTOMER_GENDER, CONTACT_CODE)
VALUES
    (16, 'MAX', 'VERSTAPPEN', 'M', 34),
    (17, 'SEBASTIAN', 'VETTEL', 'M', 35),
    (18, 'GIULIA', 'KAY', 'F', 36);
```

2.1.3(What detailed contact information has been added for the new customers, including their contact code, phone number, address, and email?)

```
INSERT INTO CONTACT (CONTACT_CODE, PHONE_NUMBER, ADRESS, MAIL)
VALUES
    (34, '5201234567', 'ANKARA/ÇANKIRI', 'maxverstappen_f1@gmail.com'),
    (35, '5309876543', 'İZMİR/ALSANCAK', 'sebastian_vettel@gmail.com'),
    (36, '5412233445', 'İSTANBUL/KADIKÖY', 'giulia.kay@example.com'),
    (37, '5503344556', 'İSTANBUL/ÇEKMEKÖY', 'abigail.marston@hotmail.com');
```

2.1.4(What test drive appointments have been saved, including the test ID, employee ID, customer ID, car chassis ID, and test drive date?)

```
INSERT INTO TEST (TEST_ID, EMPLOYEE_ID, CUSTOMER_ID, CAR_CHASIS_ID,
TEST_DRIVE_DATE)
VALUES
    (2, 4, 6, 14, '2023-07-28'),
    (3, 8, 7, 25, '2024-09-29'),
    (4, 4, 8, 6, '2024-10-03'),
    (5, 11, 9, 17, '2024-12-30'),
    (6, 9, 10, 38, '2025-02-15'),
    (7, 8, 11, 19, '2025-03-09');
```

2.1.5(What feedback values have been added for customers, including their satisfaction ratings for car, employee, and substation, along with the feedback ID and customer ID?)

```
INSERT INTO FEEDBACK (FEEDBACK_ID, CUSTOMER_ID, CAR_SATISFACTION,
EMPLOYEE_SATISFACTION, SUBSTATION_SATISFACTION)
VALUES
    (1, 3, 4, 5, 3),
    (2, 10, 5, 4, 2),
    (3, 5, 3, 3, 4),
    (4, 2, 4, 5, 5),
    (5, 6, 2, 3, 4),
    (6, 11, 5, 5, 5),
    (7, 9, 3, 4, 2),
    (8, 15, 4, 2, 3),
    (9, 13, 5, 5, 4),
    (10, 8, 3, 2, 5);
```

2.2 - 5 UPDATE

2.2.1(What price updates have been made to the cars in the database due to inflation, with a 5% increase applied to all car prices?)

```
UPDATE CARS
SET CAR_PRICE = CAR_PRICE * 1.05
```

2.2.2(What updates have been made to the employee database with the new year, specifically regarding increasing each employee's experience by one year?)

```sql
UPDATE EMPLOYEE
SET EMPLOYEE_EXPERIENCE = EMPLOYEE_EXPERIENCE + 1;
```

2.2.3(What updates have been made to the engine database to label engines when TURBO seciton is NULL?)

```sql
UPDATE ENGINE
SET ENGINE_TURBO = 'NO TURBO'
WHERE ENGINE_TURBO IS NULL;
```

2.2.4(What location updates have been made for specific employees and permanent customers in the database, including changes to their addresses?)

```sql
UPDATE CONTACT
SET ADRESS = 'İSTANBUL/ÜSKÜDAR'
WHERE CONTACT_CODE IN (1, 2);
UPDATE CONTACT
SET ADRESS = 'İZMİR/KONAK'
WHERE CONTACT_CODE IN (9);
UPDATE CONTACT
SET ADRESS = 'İZMİR/BUCA'
WHERE CONTACT_CODE IN (5, 17);
UPDATE CONTACT
SET ADRESS = 'ANKARA/ETİMESGUT'
WHERE CONTACT_CODE IN (19);
```

2.2.5(What update has been made to the payment type for a specific order, changing it to 'CASH' due to a bank problem?)

```sql
UPDATE PAYMENT
SET PAYMENT_TYPE = 'CASH'
WHERE ORDER_ID = 5;
```

2.3 - 2 DELETE

2.3.1(What test drive data has been deleted from the database, specifically those older than one year?)

```
DELETE FROM TEST
WHERE TEST_DRIVE_DATE < DATEADD(YEAR, -1, GETDATE());
```

2.3.2(What cars have been deleted from the database due to the decision to stop selling a specific brand (Nissan) because of a technical parts issue?)

```
DELETE FROM CARS
WHERE CAR_BRAND = 'NISSAN';
```

3 - The corresponding CREATE clauses, 5 ALTER TABLE and 2 DROP TABLE clauses

3.1 - CREATE CLAUSES

(This CREATE TABLE code has been executed in this order because they have a referential dependency on each other.)

```
CREATE TABLE CONTACT (
    CONTACT_CODE INT PRIMARY KEY,
    PHONE_NUMBER CHAR(10),
    ADRESS VARCHAR(255),
    MAIL VARCHAR(50)
);
```

```sql
CREATE TABLE CARS (
    CAR_CHASIS_ID INT PRIMARY KEY,
    CAR_TYPE VARCHAR(10),
    CAR_SEGMENT VARCHAR(8),
    CAR_BRAND VARCHAR(30),
    CAR_MODEL VARCHAR(40),
    CAR_COLOR VARCHAR(10),
    CAR_YEAR SMALLINT,
    CAR_PRICE DECIMAL(12, 2)
);

CREATE TABLE SERVICE (
    SERVICE_ID INT PRIMARY KEY,

```

3.2 - 5 ALTER TABLE

3.2.1

```sql
ALTER TABLE CARS
ADD DOOR_COUNT TINYINT;
```

3.2.2

```sql
ALTER TABLE CARS
ADD CONSTRAINT chk_car_year
CHECK (CAR_YEAR >= 1900 AND CAR_YEAR <= YEAR(GETDATE()));
```

3.2.3

```
ALTER TABLE SERVICE
ADD SERVICE_DESCRIPTION VARCHAR(255);
```

3.2.4

```
ALTER TABLE EMPLOYEE
ADD CONSTRAINT chk_gender CHECK (EMPLOYEE_GENDER IN ('M',
'F'));
```

3.2.5

```
ALTER TABLE TEST
ADD CONSTRAINT uq_test_drive_date UNIQUE (TEST_DRIVE_DATE);
```

3.3 - 2 DROP TABLE

3.3.1

```
DROP TABLE FEEDBACK;
```

3.3.2

```
DROP TABLE TEST;
```

4 - 5 VIEW CLAUSE

4.1(What view has been created to display customer contact details, including their phone number, email, and address?)

```
CREATE VIEW Customer_Contact_Info AS
SELECT
    C.CUSTOMER_ID,
    C.CUSTOMER_NAME,
    C.CUSTOMER_SURNAME,
    C.CUSTOMER_GENDER,
    T.PHONE_NUMBER,
```

```
    T.MAIL,
    T.ADRESS
FROM CUSTOMER C JOIN CONTACT T ON C.CONTACT_CODE = T.CONTACT_CODE;
```

```

5.2 (Index about CARS basic EXTERIOR details)

```
CREATE INDEX car_index ON CARS (CAR_TYPE, CAR_MODEL, CAR_COLOR);
```

6 - 1 Trigger and 1 Stored Procedure

6.1 TRIGGER

Explanation: This trigger ensures that when a new payment transaction is added, the SITUATION column in the CARS table for the corresponding CAR_CHASIS_ID related to the same ORDER_ID is updated to 'Sold'. It updates the order and marks the associated car as 'Sold' upon the addition of a new payment.

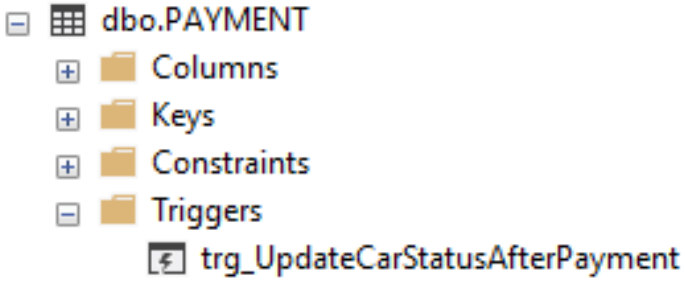

```
CREATE TRIGGER trg_UpdateCarStatusAfterPayment
ON PAYMENT
AFTER INSERT
AS
BEGIN
    DECLARE @OrderID INT;
    SELECT @OrderID = ORDER_ID
    FROM INSERTED;
    UPDATE CARS
    SET SITUATION = 'Sold'
    WHERE CAR_CHASIS_ID IN (
        SELECT CAR_CHASIS_ID
        FROM ORDERS
        WHERE ORDER_ID = @OrderID
    );
END;
```

Before;

18	SPORT	EXOTIC	BUGATTI	DIVO	BLUE	2024	5000000,00	Available

After;

18	SPORT	EXOTIC	BUGATTI	DIVO	BLUE	2024	5000000,00	Sold

6.2 STORED PROCEDURE

Explanation: This stored procedure, AddOrder, checks the status of a car using its chassis ID. If the car's status is "Sold," it raises an error and prevents the order from being created. If the car is not sold (i.e., its status is available), it inserts a new order into the ORDERS table with the provided order ID and chassis ID, ensuring that only available cars can be ordered.

```
CREATE PROCEDURE AddOrder
    @p_order_id INT,
    @p_car_chasis_id INT
AS
BEGIN
    DECLARE @car_status VARCHAR(10);
    SELECT @car_status = SITUATION
    FROM CARS
    WHERE CAR_CHASIS_ID = @p_car_chasis_id;
    IF @car_status = 'Sold'
    BEGIN
        RAISERROR('This car has already been sold, cannot create an order for it.', 16,
1);
    END
    ELSE
    BEGIN
        INSERT INTO ORDERS (ORDER_ID, CAR_CHASIS_ID)
        VALUES (@p_order_id, @p_car_chasis_id);
    END
END;
```

```
SELECT * FROM sys.objects WHERE type = 'P';
```
